- ✔ Sass & Tailwind
- ✔ NodeJs (express)
- ✔ Mongo DB
- ✔ git & github
- ✔ figma

Projects :

+ Rental cars project

I learned a lot from this project. I built it using the MERN stack technology stack with Tailwind CSS. I implemented authentication and authorization with JWT and HTTP cookies. Additionally, I utilized map APIs and Cloudinary for storing images, among other technologies.

+Todo list

This is my first MERN stack project that I built with love. My to-do list includes authentication and authorization with JWT. Throughout this project, I've discovered a lot and developed my problem-solving skills

+ E-commerce Store

When I decided to build my e-commerce platform, I noticed many others following conventional approaches. To distinguish my project, I took a unique route. Rather than creating individual stores, I developed a single brand that hosts multiple stores. Each store within the brand focuses on distinct niches such as fitness or pets, offering a diverse range of products
